## Prototyping has never been easier with ALEXAN's Presensitized PCBs!!

Presensitized positive (+) acting printed boards now available in various sizes. These boards are coated with a highly sensitive photoresist film that allows short exposure time, typically 60 to 90 seconds using UV exposure unit or 6 to 10 minutes using Fluorescent lamp. These boards are ideal for prototyping and small production runs. No negatives or dark-room are needed since they can be exposed directly from art transparency. A light protective cover allows them to be cut into specific sizes without exposing other areas of the board. The boards are 1.6-mm in thickness and come in various sizes as listed below:

Double Sided	Single Sided
GD 4 x 6	PP 4 x 6
GD 6 x 10	PP 6 x 10
GD 12 X 12	PP 12 X 12
GD 12 x 18	PP 12 x 18
